
(a) information vs depth
F_Q^A/F_Q
brickwork depth D
f=0.6, near
f=0.6, far
f=0.8, near
f=0.8, far
(b) best setting vs depth
η_{needle}
brickwork depth D
Haar gates, f=0.6
Haar gates, f=0.8
Clifford gates, f=0.8
(c) U(1): plateau ×1.92
η_{needle}
brickwork depth D
generic
U(1)-symmetric
(d) rank at the free-fermion point
rank(Γ)/m
number of CZ gates k
f=0.5
f=0.6
f=0.8
(e) best setting vs CZ count
η_{needle}
number of CZ gates k
f=0.5
f=0.6
f=0.8
(f) per-gate rate vs size
decay rate per gate
system size n
free fermion, f=1/2
free fermion, f>1/2
$-\ln(1-2/n)$
doped Clifford (per T)
$\ln(4/3)/2$
